

a body;
 transmitting and receiving means arranged in said body;
 a rotatable jog dial selection device arranged on said
 body operable by a user in a first direction along a surface
 of said body and in a second direction substantially
 perpendicular to said first direction;

operation detection means for detecting an operation of
 said selection operation means in said first direction and in
 said second direction;

storage means for storing data of a plurality of
 selection items which are hierarchically arranged;

display means for displaying said plurality of selection
 items read out of said storage means; and

control means for controlling a position of a pointer to
 indicate a desired item out of said plurality of selection
 items displayed on said display means when said selection
 operation means is operated in said first direction and
 changing a display layout when said selection operation means
 is operated in said second direction to change from a display
 listing selection items of high hierarchy in a first format to
 a display listing selection items of low hierarchy in a second
 format, said first and second formats being recognizably
 different, wherein

said first direction is circumferential relative to said
 jog dial; and

said second direction is radial relative to said jog
 dial.

--6. (Amended) The portable communication terminal
